

## Product:

Things that you have to set up on your website where the actual product is placed in order for creating a referral URL with the help of a developer.

In this document, we will let you how and where to add the script on your website. To get the data for the successful sale on ShareAds Account you have to follow the following process.

### Step 1:

```
<script  
src="https://shareads.com//assets/site/js/shareads.min.js ">  
</script>
```

You have to place the above-mentioned Script in the header of every page of your product site. For example, if your product is from website “alibaba.com” you have to place this Script in the header of every page of this website.

### Step 2:

```
<script  
src="https://shareads.com//assets/site/js/shareads_catcher.min.js">  
</script>
```

You have to add this script on the success page of the website and call the following function at the same time.

```
$(function () {  
    orderCatcherForm.init ('<order ID>', '<transaction ID>');  
});
```

This function will get the data and send it to ShareAds as a Sale’s confirmation.

The above mentioned process is to verify the following things.

- Verification of your Website
- Verification of your Product
- Verification of your Sale

The first script that you will add on every page of your website will be for the verification that it is actually your own site and you are the entity with authorized credentials of this website. In addition by adding the second script on the success page of your website will verify the sale and ShareAds will get the data and Publisher and Advertiser account will be updated. We will update the data on ShareAds. The collection of such information will be used only for the verification purpose from our side. These scripts are designed to provide the ease to our publishers and advertisers and in any case there will be no negative use these scripts.
