Tracking Documentation of ShareAds

The complexity of documentation: Beginner developer

Getting Started

Becoming a member of ShareAds is completely free. Once you've joined our network, we'll provide you with advertising links to share across your social media. We will then pay you the fee for actions resulting from the links that you share. For the successful operation of ShareAds, we will capture your transactions. You can implement our solution of tracking on your website manually if you are not using any platform that we already integrate with. The installation of our Tracking System is not very difficult. You just have to follow these steps to install our Tracking system to your website manually.

For the installation of the tracking system of ShareAds follow these steps

• Add the Script

• Call the Constructors

• Include the Parameters

Add Script

You always get a successful page window/Tab/Pop-up whenever you get the successful sale of your product. The successful page indicates that they received your payment and your order is in the queue. For the ShareAds, you have to add the following script on the Success Page where the success of your product is achieved.

Script:

```
<Script src="http://shareads.com/assets/site/js/shareads_catcher.min.js"></script>
```

Call the Constructors

The next step in installing the tracking system of ShareAds is to call the Constructors. Constructors are called to initialize the values of parameters. The required parameters for the tracking system of ShareAds are

- Order ID

- Transaction ID

Code:

```
<script src="http://shareads.com/assets/site/js/shareads_catcher.min.js"></script>
$(function ()
{ // --- shareads -> params('order_id','transaction_id') ---
orderCatcherForm.init(< order_id >,< transaction_id >);
});
```

Include the Parameters:

Here the question arises how to add the parameters to your scripted code on your website so we can keep the track of your transactions. For this purpose have a look on the following example

Example:

```
<script src="http://shareads.com/assets/site/js/shareads_catcher.min.js"></script>
$(function ()
{ orderCatcherForm.init('order_id_1','transaction_id_1');
});
```

Note:

For the best results this is strongly recommended to paste the code after the following Script

```
<script src="http://shareads.com/assets/site/js/shareads.min.js"></script>
```

Cookie Policy

The small amount of data generated by a website and saved by your browser is known as COOKIE. The purpose of the cookie is to remember the information about you. Cookies perform different functions but the main functionality of cookie is to store the login credentials. Most of the web browsers store all the cookies in a single file. Modern browsers allow you to view your cookie typically in "Privacy" or "Security" tab.

When Publisher wants to create an account on our website, the Publisher will get a referral link in the Email through which he can create its Publisher Account. When the Publisher invited via referral link cookie will be created by the ShareAds to store the information. If the Advertiser lost its referral link what will happen?

No need to worry as we mentioned that the information will save in the Cookie. The information is available on the cookie for two weeks. Once you Sign-up on ShareAds the cookie will be destroyed.
