Things that you have to set up on your website where actual product is placed in order for creating a referral URL with the help of developer

Product Type: Lead Generation
Step 1:
In the case of *Lead Generation*
On your website source code => Submit Button.
Add this script file

<script src="https://shareads.co.uk/assets/site/js/shareads.min.js"></script>

Now, behind **Pay Now** button insert following URL with certain parameters.
URL => "http://shareads.co.uk/checkout/lead_generation"

Parameters are:
url
affid

These parameters are serialized array base64_encoded parameters with an attribute name
$post = base64_encode(serialize(array('url'=>website_url,'affid'=>$affid)));

Now URL will become
http://shareads.co.uk/checkout/lead_generation?post= ENCODED STRING

Product Type: Product
Step 2:
In the case of *Simple Product*
On your website source code => Add to Cart page.
Add this script file

<script src="https://shareads.co.uk/assets/site/js/shareads.min.js"></script>

Now, behind **Pay Now** button insert following URL with certain parameters.
URL => "http://shareads.co.uk/checkout/"

Parameters are:

price
url
affid

These parameters are serialized array base64_encoded parameters with an attribute name
$post = base64_encode(serialize(array('price'=>product_price,
'url'=>website_url,'affid'=>$affid)));

Now URL will become
http://shareads.co.uk/checkout?post= ENCODED STRING

Product Type: Site Product
Step 2:

In the case of *Simple Product*
